SUMMARY

Full-Stack Developer with 1+ year of production experience building and running a manufacturing ERP that serves 12 departments (Laravel, PHP, MySQL), plus HR and booking platforms for a service company. Covers the full cycle from requirements and system analysis through database design, backend architecture, API integration with an accounting system (Accurate Online), deployment and production support. Based in Bekasi, open to remote and onsite roles. Currently pursuing a Master of Computer Science.

EXPERIENCE

Full-Stack Developer **Aug 2025 to Present**

PT Ganzu Gisma Seiko | Hybrid | Manufacturing ERP and business systems

Stack: Laravel 10, PHP, MySQL, Bootstrap, jQuery, ApexCharts, Accurate Online API, Hostinger

- Sole developer of a manufacturing ERP built from scratch and in daily use, covering Sales, Procurement, Warehouse, PPC and MRP, Production, QC, Delivery, Finance, HRD, Production Engineering, Maintenance and General Affairs (12 departments).
- Designed role-based access control with 30+ roles across staff, supervisor and manager tiers, with department-specific multi-level approval workflows applied consistently across transactional modules.
- Integrated the ERP with Accurate Online (OAuth 2.0, REST API): items, vendors, purchase requests, purchase orders and goods receipts are sent from the ERP with Accurate-issued document numbers, checked against Accurate master data before sending and read back afterwards to verify amounts.
- Designed the integration for financial data safety: each document is sent once with no automatic retry, duplicates are prevented, failures are held in explicit states (held, failed, unknown, out of sync) and every flow has its own on and off switch. The ERP never deletes data in Accurate.
- Built an MRP engine that calculates raw material requirements from sales orders and bills of materials and generates purchase requests that follow the department approval workflow.
- Built QC inspection for incoming material, customer-supplied material and in-process production, with NG tracking and rework orders, each result linked to its source document.
- Designed a normalized relational schema of 100+ tables and built executive and per-module dashboards for production, inventory and financial visibility.
- Linked sales orders to delivery notes, invoices and payments so each department works from the same document chain.
- Audited the codebase and resolved 278 findings covering access control, validation and data integrity.

Full-Stack Developer (Project-Based) **Jan 2025 to Oct 2025**

Rainbrow Sulam Alis | HR, aftercare and booking systems

Stack: CodeIgniter 3, PHP, MySQL, Tailwind CSS, REST API, WhatsApp API, AJAX, Hostinger

- Delivered three business applications as a two-person team with the HR Supervisor, all completed ahead of schedule.
- HRIS: employee management, recruitment, performance, leave and payroll, with GPS-based attendance using server-side geofencing validation, training scheduling with completion tracking, an HR analytics dashboard and role-based access for admin, manager and staff.
- Aftercare Dashboard: automatic low-rating detection across service, comfort and result scores, branch and therapist level analytics, duplicate and unverified feedback flagging, and WhatsApp outreach links with a daily cron reminder job.
- NailShade Booking System: QR-code walk-in booking, WhatsApp feedback links, a nail artist performance leaderboard and branch comparison analytics.
- Result: faster recruitment processing, higher customer feedback collection and quicker aftercare follow-up.

IT Support Intern **Nov 2023 to Jan 2024**

PT Komatsu Undercarriage Indonesia | On-site | Heavy industry

Stack: Alpha Anywhere, SQL

- Implemented form logic and data binding for the Delivery Note module in Alpha Anywhere.
- Researched and designed a web-based shipment monitoring application, producing a design document with ERD, database schema and logistics process mapping.
- Supported hardware maintenance, network troubleshooting and system deployment.

EDUCATION

Master of Computer Science **2026 to Present**

Universitas Esa Unggul | GPA 3.85/4.00 (after first semester)

Bachelor of Information Technology **2020 to 2025**

Universitas Bina Sarana Informatika | GPA 3.95/4.00, Cum Laude

Thesis: Web-Based Payroll Information System Using CodeIgniter 3 and Waterfall SDLC to Improve HR Operational Efficiency at PT Beauty Abadi Utama.

SKILLS

Languages: PHP, JavaScript, TypeScript, Python, HTML5, CSS3

Frameworks and libraries: Laravel (v9 to v12), CodeIgniter 3 and 4, React, Next.js, Vue.js, Node.js, Bootstrap, Tailwind CSS, jQuery, ApexCharts, Chart.js, Drizzle ORM

Databases: MySQL, PostgreSQL, Neon PostgreSQL

APIs and integration: REST API, OAuth 2.0, Accurate Online API, WhatsApp API, AJAX, Anthropic API

Tools and platforms: Git, GitHub, GitHub Actions, Hostinger, Vercel, Railway, Figma, Canva, Adobe Photoshop

Practices: ERP development, system analysis and requirements gathering, role-based access control, admin dashboards, POS applications

Spoken languages: Indonesian (native), English (TOEFL Prediction Test score: 590)

CERTIFICATIONS

- PHP Certificate, Beginner to Advanced, Udemy, 2024
- Front-End Web Development, Coding Studio, 2024

ADDITIONAL PROJECTS

- Class E-Learning Platform (2026): CodeIgniter 4, PHP, MySQL. Course material distribution, assignment submission and progress tracking for classmates at Universitas Esa Unggul.
- Role-Based Image Storage Platform (2026): Laravel 11, PHP, MySQL. Upload management, CDN URL generation and multi-role access control.
